FREE DEMO / UNITY

Underwater Bubbles.

A little preview. A whole world of water.

These underwater bubbles are included as a **free demo** of our **Realistic Water VFX** pack. Explore the live demo, watch the video preview, or find the full pack for your Unity render pipeline below.

01 / FULL PACK FEATURES

Surfaces & natural water

Shape the look of your water, from peaceful ponds and flowing streams to open oceans, cascades and rain-covered materials.

The catalogue below describes the full Realistic Water VFX pack.

Customizable Water Surface Shaders

01

Tailor the look and feel of your water surfaces with customizable shaders. Easily adapt the water to the atmosphere of your virtual world.

Calm Water

02

Create serene environments with a calm water material built using the customizable shader. Ideal for reflective lakes, ponds, or any scene that needs a peaceful aquatic setting.

Flowing Water

03

Simple water flowing in a specific direction. **Does not support blending at bifurcations**, where the flow splits into multiple branches.

Ocean Backdrop and Waves

04

Choose a performant ocean backdrop or a dynamic material based on **Gerstner waves**. Give your ocean convincing motion instead of leaving it stiff and still.

Waterfalls

05

Create natural cascades with mist and the dynamic water material system. Bring a sense of movement to your water environments.

Raindrop Materials

06

Add static or dynamic raindrops to your materials. **Open the shader** for further information on how to integrate and use the raindrop setup.

02 / FULL PACK FEATURES

Water sources & sprays

Bring water into everyday spaces, farming simulations and interactive scenes with a variety of ready-to-use sources and sprays.

The catalogue below describes the full Realistic Water VFX pack.

Farming Water Sprinkler 07

Creating a farming sim? Bring agricultural scenes to life with a detailed water sprinkler. Recreate the sound and sight of water spraying over crops to enrich the farming experience.

Garden Hose 08

Bring gardens to life with a hose spray effect. Simulate water spraying from a garden hose for interactive, dynamic watering scenes.

Pressure Washer 09

Ever played PowerWash Simulator? That's the idea: a forceful spray of water for cleaning scenes, adding another visual layer to your interactions.

Pump 10

Use the pump in agricultural simulations or puzzle games. Activate and deactivate it to make the stream respond, elongating as it runs while the floor gets soaked.

Faucet 11

Add realistic water flow from a household faucet to domestic scenes. Inspired by games such as Hitman, use overflowing water as the visual basis for environmental traps in your own gameplay.

Shower 12

Bring bathroom and architectural visualization scenes to life with a realistic shower effect. Water flow and droplet interactions add an extra level of detail to your interiors.

03 / FULL PACK FEATURES

Atmosphere & interaction

Set the mood with rain and leaks, add splashes to your interactions, or take the scene underwater with the bubbles in this free demo.

The catalogue below describes the full Realistic Water VFX pack.

Dripping Ledges and Leaks

13

Bring realism to architectural elements with customizable dripping ledges. Simulate water dripping and leaking from surfaces, adding authenticity to rainy scenes and damp environments.

Generic Splashes

14

A couple of versatile splashes for a wide range of scenarios. From playful interactions to leaky pipes, add a splash of realism wherever your scene needs it.

Rain

15

Set the mood with realistic rain. Simulate falling raindrops and impacts on surfaces to build an immersive rainy atmosphere.

Fire Alarm Water Sprinkler

16

Designed for indoor disaster and horror scenes when everything is on fire and chaos surrounds the player. Add the spray of an activated fire sprinkler to the moment.

Fire Hydrant

17

Driving through LA, you'll probably break a few hydrants. We all did it in GTA! Bring that familiar burst of water to your urban scenes.

Underwater Bubbles

18

Dive into the depths with the underwater bubbles particle system. Hear that? It sounds like the Pokémon Emerald Dive theme playing on repeat for hours. Hehehe.
